

Wood Characteristics

RT Door Company uses the finest woods available to create the strongest doors.

Specializing in custom handcrafted doors for all your home's needs

Wood Characteristics

We specialize in Appalachian hardwoods grown in the Appalachian region of the United States. This lumber is the finest lumber in the world, grown in soil composed of a beneficial blend of minerals and nutrients that feed hardwood trees.

The Appalachian Mountains provide just the right climate to produce the strongest and most durable lumber available. This area has warm summers which assist the growth and development of trees but cool spring and fall seasons and cool winters which allows this growth to be gradual. Slow, gradual, growth means tight growth rings, strong fibers and consistent grains that lead to superior strength, durability and beauty.

No matter what wood *species* you select, each piece of wood is carefully examined to ensure it lives up to the high standards RT Doors has for *quality*, appearance and performance.
